

The first installation of the interactive TV system Atlantis, now even on LG TV.

In the HIT hotel Mond in Šentilj, we have in November successfully integrated our interactive hotel TV solution, **the system Atlantis**, that now works even on LG LCD TV sets.

The system was installed over the existing SmartTV sets from LG electronics, that have previously been using the LG's factory-made basic version of the hotel interactive TV system, LG ProCentric 3.0.

With the system upgrade the hotel has now gained different extra features, like: - A more esthetic and personalised graphical user interface

- Bi-directional control of TV sets (even email error reporting)
- Guest device screen mirroring
- SmartTV apps
- etc...

This is our first live setup of the hotel interactive system on the hotel SmartTV sets from LG electronics. Meanwhile this is also contemporary a first of the kind of installation (a personalised integrator made solution, directly on base of the hotel SmartTV sets LG), that has been made and installed here in the Adriatic region.

A demo of our system can be seen on the following link: www.hotel-iptv.eu
